# Frontier Fam Creatives

## Origami

# TULIP

- Cut paper into square by folding and removing excess

# TULIP

- Fold from corner to corner

# TULIP

- Unfold and repeat with other corner

# TULIP

- Proceed to unfold

# TULIP

- Make sure that everything is still folded slightly inward, then take two of the sides across from each other and push them together, and then fold the halves down on top of each other to make a triangle sandwich

# TULIP

- This is what it should look like

# TULIP

- Take the bottom corner (left or right) and touch it to the point of the triangle. It should match up with the middle crease

# TULIP

- Repeat on other side then flip your triangle over

# TULIP

- Take the bottom corner (left or right) and touch it to the point of the triangle. It should match up with the middle crease

# TULIP

- You should now have a square

# TULIP

- Now we are going to fold the sides over. Take the front right piece (leave the back) and fold it to the left.

# TULIP

- Now take the back left piece, and fold it to the right. Your square should no longer have a crease down the middle.

# TULIP

- Find the part of the square that has the open edges.

# TULIP

- Now, on the top, fold one side slightly past the middle line (not too far)

# TULIP

- Repeat on the other side so the two sides overlap
- Open one side's flap (the edge) and tuck the other side's flap in

- Flip over the paper, and repeat.
- Fold each edge slightly past the middle line, and tuck one flap into the other's edge

# TULIP

- Squeeze sides out gently, and look at the bottom. You should see a small hole

# TULIP

- Put your mouth on the paper where the hole is, and blow into that to make the paper poof out
- If your sides came undone while poofing it out, just tuck them back in!

# TULIP

- Then, on the top you'll see 4 strips. We are going to peel these back slowly. Your paper might become untucked again, just tuck it back.

# STEM

- Grab another square piece of paper. We recommend using the same size you used for your flower.

# STEM

- Now, fold that paper diagonally and then unfold.
- Fold the top sides into the line (don't go further than the middle line this time)
# STEM

- Now, fold in the sides on the bottom half

- The bottom half that you just folded in, fold in those sides again

# STEM

- Flip the paper over
- Fold the pointiest side up to meet the other point

# STEM

- Fold in half with the smaller side inward (big side is wrapping around it like a blanket)

# STEM

- Now, open that fold back up, and start peeling back the bigger side until about halfway down the small side
- Fold inwards again on the small side, with the bigger side folding around it

# Complete

- Now, stick this into the hole on the bottom of your tulip
- Your flower is complete
